

## Tin can insects

Step 1 -Get your cans and wash all the contents away and take off any labels and then paint your cans yellow or red with acrylic paint. You may have to paint them a couple of times and totally cover the cans

Step 2- Next step is to get 2 pop bottle lids and paint the inside of them with black acrylic paint to make them look like eyes. Stick your eyes on the bottom of your tin with strong glue.

Step 3-cut a figure 8 out of a pop bottle and put to the side

Step 4- Next step is to paint black stripes across your yellow tins and black spots on your red tins.

Step 5- Screw 2 screws at the front into the tins to make antennas and one in the middle to hold wings and string to hang.

All ready to hang out
